

# Placeholder paper

TEST CONTENT ONLY — NOT COURSE MATERIAL — REPLACE BEFORE LAUNCH

Six pages. Generated so the papers viewer can be tested at this length.

|                |                                     |
|----------------|-------------------------------------|
| Length         | Six pages                           |
| Purpose        | Exercise the papers list and viewer |
| Contains       | No real course content              |
| Safe to delete | Yes                                 |

Each of these placeholder papers is a different length on purpose. A one page document and a fourteen page document fail in different ways, and a viewer that handles one will not always handle the other.

If this text is legible, the font is embedding correctly. If any character shows as a black box, something in the generation step needs looking at before real material goes in.

The last thing worth checking is what happens when the file is missing. Rename this file on the server and open it from the app. An honest message is fine; a blank screen is not.

## Section 2

This document exists so the papers section of the app can be opened, scrolled, zoomed and read on a phone. Nothing on these pages is course material, and none of it should be studied.

A paper is meant to be something a student reads beside a lesson rather than something they work through in order. The point of testing with a real file rather than a stub is that the things that go wrong go wrong at the edges: a long document that will not scroll on a phone, a page that renders blank, a file that cannot be found and fails silently.

Read the page number at the foot of every page while testing. If the viewer reports a different count from the one printed here, the count is coming from the wrong place.

## Section 3

Each of these placeholder papers is a different length on purpose. A one page document and a fourteen page document fail in different ways, and a viewer that handles one will not always handle the other.

If this text is legible, the font is embedding correctly. If any character shows as a black box, something in the generation step needs looking at before real material goes in.

The last thing worth checking is what happens when the file is missing. Rename this file on the server and open it from the app. An honest message is fine; a blank screen is not.

## Section 4

This document exists so the papers section of the app can be opened, scrolled, zoomed and read on a phone. Nothing on these pages is course material, and none of it should be studied.

A paper is meant to be something a student reads beside a lesson rather than something they work through in order.
